## Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems)

New sequencing technologies have broken many experimental barriers to genome scale sequencing, leading to the extraction of huge quantities of sequence data. This expansion of biological databases established the need for new ways to harness and apply the astounding amount of available genomic information and convert it into substantive biological understanding.

A compilation of recent approaches from prominent researchers, **Bioinformatics: High Performance Parallel Computer Architectures** discusses how to take advantage of bioinformatics applications and algorithms on a variety of modern parallel architectures. Two factors continue to drive the increasing use of modern parallel computer architectures to address problems in computational biology and bioinformatics: high-throughput techniques for DNA sequencing and gene expression analysis?which have led to an exponential growth in the amount of digital biological data?and the multi- and many-core revolution within computer architecture.

Presenting key information about how to make optimal use of parallel architectures, this book:

- Describes algorithms and tools including pairwise sequence alignment, multiple sequence alignment, BLAST, motif finding, pattern matching, sequence assembly, hidden Markov models, proteomics, and evolutionary tree reconstruction
- Addresses GPGPU technology and the associated massively threaded CUDA programming model
- Reviews FPGA architecture and programming
- Presents several parallel algorithms for computing alignments on the Cell/BE architecture, including linear-space pairwise alignment, syntenic alignment, and spliced alignment
- Assesses underlying concepts and advances in orchestrating the phylogenetic likelihood function on parallel computer architectures (ranging from FPGAs upto the IBM BlueGene/L supercomputer)
- Covers several effective techniques to fully exploit the computing capability of many-core CUDA-enabled GPUs to accelerate protein sequence database searching, multiple sequence alignment, and motif finding
- Explains a parallel CUDA-based method for correcting sequencing base-pair errors in HTSR data

Because the amount of publicly available sequence data is growing faster than single processor core performance speed, modern bioinformatics tools need to take advantage of parallel computer architectures. Now that the era of the many-core processor has begun, it is expected that future mainstream processors will be parallel systems. Beneficial to anyone actively involved in research and applications, this book helps you to get the most out of these tools and create optimal HPC solutions for bioinformatics.

### **From reader reviews:**

#### **William Duhon:**

Do you one among people who can't read pleasant if the sentence chained in the straightway, hold on guys this particular aren't like that. This Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) book is readable by simply you who hate those perfect word style. You will find the data here are arrange for enjoyable reading through experience without leaving possibly decrease the knowledge that want to give to you. The writer connected with Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) content conveys objective easily to understand by many people. The printed and e-book are not different in the written content but it just different by means of it. So , do you even now thinking Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) is not loveable to be your top record reading book?

#### **Bert Martinez:**

Often the book Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) has a lot of information on it. So when you check out this book you can get a lot of benefit. The book was compiled by the very famous author. Mcdougal makes some research previous to write this book. This kind of book very easy to read you will get the point easily after perusing this book.

#### **Delois Dionisio:**

Do you one of the book lovers? If so, do you ever feeling doubt if you are in the book store? Aim to pick one book that you never know the inside because don't determine book by its include may doesn't work at this point is difficult job because you are scared that the inside maybe not as fantastic as in the outside search likes. Maybe you answer might be Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) why because the great cover that make you consider about the content will not disappoint a person. The inside or content is usually fantastic as the outside or perhaps cover. Your reading 6th sense will directly guide you to pick up this book.

#### **David Gaiter:**

Reading a reserve make you to get more knowledge from the jawhorse. You can take knowledge and information from a book. Book is prepared or printed or highlighted from each source in which filled update of news. On this modern era like currently, many ways to get information are available for an individual. From media social just like newspaper, magazines, science reserve, encyclopedia, reference book, book and comic. You can add your understanding by that book. Do you want to spend your spare time to spread out your book? Or just in search of the Bioinformatics: High Performance Parallel Computer Architectures (Embedded Multi-Core Systems) when you desired it?
