Atomic Properties in Hot Plasmas: From Levels to Superconfigurations Jacques Bauche, Claire Bauche-Arnoult, Olivier Peyrusse

This book is devoted to the calculation of hot-plasma properties which generally requires a huge number of atomic data. It is the first book that combines information on the details of the basic atomic physics and its application to atomic spectroscopy with the use of the relevant statistical approaches. Information like energy levels, radiative rates, collisional and radiative cross-sections, etc., must be included in equilibrium or non-equilibrium models in order to describe both the atomic-population kinetics and the radiative properties. From the very large number of levels and transitions involved in complex ions, some statistical (global) properties emerge.

The book presents a coherent set of concepts and compact formulas suitable for tractable and accurate calculations. The topics addressed are: radiative emission and absorption, and a dozen of other collisional and radiative processes; transition arrays between level ensembles (configurations, superconfigurations); effective temperatures of configurations, superconfigurations, and ions; charge-state distributions; radiative power losses and opacity. There are many numerical examples and comparisons with experiment presented throughout the book. The plasma properties described in this book are especially relevant to large nuclear fusion facilities such as the NIF (California) and the ITER (France), and to astrophysics.

Methods relevant to the central-field configurational model are described in detail in the appendices: tensor-operator techniques, second-quantization formalism, statistical distribution moments, and the algebra of partition functions. Some extra tools are propensity laws, correlations, and fractals. These methods are applied to the analytical derivation of many properties, specially the global ones, through which the complexity is much reduced. The book is intended for graduate-level students, and for physicists working in the field.

From reader reviews:

Suzanne Crider:

The book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations can give more knowledge and information about everything you want. Exactly why must we leave a very important thing like a book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations? Wide variety you have a different opinion about publication. But one aim in which book can give many data for us. It is absolutely correct. Right now, try to closer using your book. Knowledge or information that you take for that, you are able to give for each other; you may share all of these. Book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations has simple shape however, you know: it has great and massive function for you. You can appear the enormous world by available and read a publication. So it is very wonderful.

Lenore Cortez:

Book is to be different for each grade. Book for children till adult are different content. We all know that that book is very important normally. The book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations ended up being making you to know about other knowledge and of course you can take more information. It is very advantages for you. The reserve Atomic Properties in Hot Plasmas: From Levels to Superconfigurations is not only giving you considerably more new information but also to get your friend when you experience bored. You can spend your own spend time to read your e-book. Try to make relationship with the book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations. You never experience lose out for everything in case you read some books.

Robert Olsen:

You may get this Atomic Properties in Hot Plasmas: From Levels to Superconfigurations by visit the bookstore or Mall. Just viewing or reviewing it can to be your solve trouble if you get difficulties for ones knowledge. Kinds of this e-book are various. Not only by simply written or printed but additionally can you enjoy this book by means of e-book. In the modern era like now, you just looking of your mobile phone and searching what your problem. Right now, choose your ways to get more information about your reserve. It is most important to arrange you to ultimately make your knowledge are still change. Let's try to choose appropriate ways for you.

Thomas Gonzalez:

A lot of e-book has printed but it is different. You can get it by online on social media. You can choose the most beneficial book for you, science, comedian, novel, or whatever simply by searching from it. It is identified as of book Atomic Properties in Hot Plasmas: From Levels to Superconfigurations. You can include your knowledge by it. Without departing the printed book, it can add your knowledge and make you actually happier to read. It is most critical that, you must aware about book. It can bring you from one place to other place.
