Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications George H. Miley, S. Krupakar Murali

This book provides readers with an introductory understanding of Inertial Electrostatic Confinement (IEC), a type of fusion meant to retain plasma using an electrostatic field. IEC provides a unique approach for plasma confinement, as it offers a number of spin-off applications, such as a small neutron source for Neutron Activity Analysis (NAA), that all work towards creating fusion power. The IEC has been identified in recent times as an ideal fusion power unit because of its ability to burn aneutronic fuels like p-B11 as a result of its non-Maxwellian plasma dominated by beam-like ions. This type of fusion also takes place in a simple mechanical structure small in size, which also contributes to its viability as a source of power. This book posits that the ability to study the physics of IEC in very small volume plasmas makes it possible to rapidly investigate a design to create a power-producing device on a much larger scale. Along with this hypothesis the book also includes a conceptual experiment proposed for demonstrating breakeven conditions for using p-B11 in a hydrogen plasma simulation.

This book also:

Offers an in-depth look, from introductory basics to experimental simulation, of Inertial Electrostatic Confinement, an emerging method for generating fusion power

Discusses how the Inertial Electrostatic Confinement method can be applied to other applications besides fusion through theoretical experiments in the text

Details the study of the physics of Inertial Electrostatic Confinement in small-volume plasmas and suggests that their rapid reproduction could lead to the creation of a large-scale power-producing device

Perfect for researchers and students working with nuclear fusion, *Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications* also offers the current experimental status of IEC research, details supporting theories in the field and introduces other potential applications that stem from IEC.

From reader reviews:

Mildred Parker:

What do you consider book? It is just for students since they're still students or the idea for all people in the world, what the best subject for that? Just you can be answered for that issue above. Every person has different personality and hobby for each other. Don't to be obligated someone or something that they don't need do that. You must know how great in addition to important the book Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications. All type of book is it possible to see on many options. You can look for the internet sources or other social media.

Jessica Peacock:

Hey guys, do you would like to finds a new book to learn? May be the book with the headline Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications suitable to you? The actual book was written by famous writer in this era. Often the book untitled Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications is a single of several books this everyone read now. This book was inspired many people in the world. When you read this publication you will enter the new shape that you ever know prior to. The author explained their strategy in the simple way, thus all of people can easily to understand the core of this guide. This book will give you a wide range of information about this world now. So you can see the represented of the world within this book.

Gilbert Pellerin:

Playing with family inside a park, coming to see the coastal world or hanging out with good friends is thing that usually you could have done when you have spare time, in that case why you don't try issue that really opposite from that. 1 activity that make you not sensation tired but still relaxing, trilling like on roller coaster you are ride on and with addition details. Even you love Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications, you are able to enjoy both. It is excellent combination right, you still need to miss it? What kind of hang type is it? Oh can happen its mind hangout people. What? Still don't get it, oh come on its known as reading friends.

Josefina Roundtree:

As a scholar exactly feel bored to help reading. If their teacher questioned them to go to the library as well as to make summary for some guide, they are complained. Just tiny students that has reading's heart and soul or real their interest. They just do what the instructor want, like asked to go to the library. They go to generally there but nothing reading significantly. Any students feel that reading is not important, boring as well as can't see colorful photos on there. Yeah, it is for being complicated. Book is very important for you. As we know that on this period, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. So , this Inertial Electrostatic Confinement (IEC) Fusion: Fundamentals and Applications can make you feel more interested to read.
