Cross-Entropy Method: Theory with Applications Uri Dubin

The goal of this work is to study the application of the Cross-Entropy (CE) algorithm to problems in combinatorial optimization. This relatively new algorithm has been successfully applied to the Maximum Cut, the Travelling Salesperson, the Shortest Path problems, to Networks, Graph Coloring and other types of hard optimization problems. The CE method is based on an adaptive generic randomized algorithm. It employs an auxiliary random mechanism (a distribution function) equipped with a set of parameters, which transforms the deterministic problem into a stochastic one. The CE algorithm is a multiple iteration procedure, where each iteration involves two phases: 1. Generation of random solutions using a parametric auxiliary distribution followed by a calculation of the associated objective function. 2. Updating the parameter vector, on the basis of the best scoring solutions generated. In the first part the question of convergence of the CE procedure is explored. Using tools from Information Geometry. The second part is more experimental. New applications of the CE for real-life problems are described.

From reader reviews:

Joseph McNeal:

What do you in relation to book? It is not important along with you? Or just adding material when you want something to explain what your own problem? How about your extra time? Or are you busy man? If you don't have spare time to accomplish others business, it is give you a sense of feeling bored faster. And you have spare time? What did you do? Everyone has many questions above. They should answer that question because just their can do that will. It said that about guide. Book is familiar in each person. Yes, it is right. Because start from on pre-school until university need this Cross-Entropy Method: Theory with Applications to read.

Noel Stevens:

Nowadays reading books become more and more than want or need but also be a life style. This reading habit give you lot of advantages. Associate programs you got of course the knowledge your information inside the book that improve your knowledge and information. The knowledge you get based on what kind of e-book you read, if you want send more knowledge just go with knowledge books but if you want feel happy read one using theme for entertaining such as comic or novel. The Cross-Entropy Method: Theory with Applications is kind of book which is giving the reader capricious experience.

Gina Dana:

The e-book untitled Cross-Entropy Method: Theory with Applications is the book that recommended to you to read. You can see the quality of the publication content that will be shown to anyone. The language that writer use to explained their ideas are easily to understand. The writer was did a lot of study when write the book, hence the information that they share to your account is absolutely accurate. You also might get the e-book of Cross-Entropy Method: Theory with Applications from the publisher to make you far more enjoy free time.

Emily Higginbotham:

The guide with title Cross-Entropy Method: Theory with Applications contains a lot of information that you can learn it. You can get a lot of help after read this book. That book exist new expertise the information that exist in this reserve represented the condition of the world today. That is important to yo7u to find out how the improvement of the world. This specific book will bring you with new era of the syndication. You can read the e-book on the smart phone, so you can read the idea anywhere you want.
